

UČNI NAČRT PREDMETA / COURSE SYLLABUS	
Predmet:	POLIMERNI MATERIALI IZ OBNOVLJIVIH SUROVIN IN TEHNOLOGIJE
Course title:	POLYMERIC MATERIALS FROM RENEWABLE RESOURCES AND TECHNOLOGIES

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Tehnologija polimerov, 1. stopnja		3.	2.
Polymer Technology, 1 st level		3 rd	2 nd

Vrsta predmeta / Course type	Izbirni / Chosen
------------------------------	------------------

Univerzitetna koda predmeta / University course code:	PMOST
---	-------

Predavanja Lectures	Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
25		10 SV, 15 LV			100	5

Nosilec predmeta / Lecturer:	izr. prof. dr. Irena Pulko/ Assoc. Prof. Dr. Irena Pulko
------------------------------	--

Jeziki / Languages:	Predavanja / Lectures: Slovenski / Slovenian
	Vaje / Tutorial: Slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Osnovna znanja o splošni kemiji, uvod v polimere, kemiji polimerov, polimernem inženirstvu in strokovnem tujem jeziku.	Prerequisites: Basic knowledge of general chemistry, introduction to polymers, polymer chemistry, polymer engineering as well as professional foreign language.
--	---

Vsebina:

Alternativne surovine in tehnologije za proizvodnjo polimernih materialov: petrokemična proizvodnja; karbokemična proizvodnja; biotehnološka proizvodnja.

Obnovljive surovine kot viri za proizvodnjo polimernih materialov: opredelitev pojma obnovljive surovine oz. viri; vloga in pomen obnovljivih surovin; razvrščanje obnovljivih surovin za proizvodnjo polimernih materialov; rastlinski viri: živalski viri; bakterijski polimeri.

Opredelitev, razvrščanje, razvoj in tržni vidiki biopolimerov: opredelitev in razvrščanje biopolimerov; razvoj biopolimerov; tržni vidiki biopolimerov.

Pregled izbranih polimernih materialov iz obnovljivih surovin in tehnologij: celuloza; hemiceluloze; lignini; tanini; kemična modifikacija in utekočinjanje lesa; naravni kavčuk; škrob; polimerni materiali iz rastlinskih olj; alginati; proteini; hitin in hitozan; polimlečna kislina; poli(hidroksialcanoati); bakterijska celuloza; biopoliolefini.

Content (Syllabus outline):

Alternative raw materials and technologies for production of polymer materials: petrochemical production; coal chemical production; biotechnological production.

Renewable resources as sources for production of polymer materials: definition of the term renewable resources; role and importance of renewable resources; classification of renewable resources for production of polymer materials; vegetable resources; animal resources; bacterial polymers.

Definition, classification, development and market aspects of biopolymers: definition and classification of biopolymers; development of biopolymers; market aspects of biopolymers.

Overview of selected polymer materials based on renewable resources and technologies: cellulose; hemicelluloses; lignins; tannins; chemical modification and liquefaction of wood; natural rubber; starch; polymer materials from vegetable oils; alginates; proteins; chitin and chitosan; polylactid acid; poly(hydroksialcanoates); bacterial cellulose; biopolyolefines.

Cilji in kompetence:**Predmetno specifični cilji in kompetence:**

- Cilj predmeta je, da študent spozna polimerne materiale iz obnovljivih surovin in nove tehnologije za njihovo proizvodnjo. Seznani se s prednostmi in možnostmi uporabe alternativnih gradiv za različne tehnične namene.

Predvideni študijski rezultati:**Znanje in razumevanje:**

- Študent pozna in razume obravnavane vsebine predmeta in jih zna uporabiti pri reševanju praktičnih problemov v proizvodnji in predelavi polimernih materialov.

Metode poučevanja in učenja:

- klasična predavanja
- AV predstavitve
- obravnavanje študijskih primerov
- aktivno skupinsko delo
- delo v laboratoriju

Pogoj za pristop k izpitu:

- 100 % prisotnost na laboratorijskih in seminarских vajah
- priznana laboratorijska poročila
- priznana seminarska naloga

Objectives and competences:**Course specific goals and competences:**

- The aim of the course is that students learn the polymer materials from renewable resources and new technologies for their production. They learn the benefits and opportunities to use alternative materials for various technical purposes.

Intended learning outcomes:**Knowledge and understanding:**

- The student knows and understands the subject matter dealt with and can use them in solving practical problems in the production and processing of polymer materials.

Learning and teaching methods:

- lectures
- AV presentations
- case studies
- active teamwork
- laboratory work

Načini ocenjevanja:**Delež (v %) /****Weight (in %)****Assessment:**

<ul style="list-style-type: none"> - interaktivno delo na predavanjih - laboratorijske vaje - izdelava, predstavitev in zagovor seminarske naloge - Pisni in/ali ustni izpit 	10 20 20 50	<ul style="list-style-type: none"> - interactive work at lectures - laboratory tutorials - preparation, presentation and defence of seminar paper - Written in/and oral exam
